

CLAIMS

1. A polycarbonate resin composition comprising:
 - (A) 5 to 98 parts by weight of a polycarbonate-polyorganosiloxane copolymer,
 - (B) 0 to 93 parts by weight of a polycarbonate resin,
 - (C) 2 to 50 parts by weight of titanium oxide,
 - (D) 0 to 1.0 parts by weight of a fibril-forming polytetrafluoroethylene, and
 - (E) 0.05 to 2.0 parts by weight of an organosiloxane, wherein the sum of the ingredients (A), (B), and (C) is 100 parts by weight.
2. The polycarbonate resin composition according to claim 1, wherein the ratio of the polyorganosiloxane part in the polycarbonate-polyorganosiloxane copolymer of ingredient (A) to the sum of the ingredients (A) and (B) is 0.3 to 10% by weight.
3. The polycarbonate resin composition according to claim 1 or 2, wherein the polyorganosiloxane in the polycarbonate-polyorganosiloxane copolymer of ingredient (A) is polydimethylsiloxane.
4. The polycarbonate resin composition according to claim 1 or 2, wherein the surface acid content of the titanium oxide of ingredient (C) is 10 $\mu\text{mol/g}$ or more.
5. The polycarbonate resin composition according to claim 1 or 2, wherein the surface base content of the titanium oxide of ingredient (C) is 10 $\mu\text{mol/g}$ or more.
6. The polycarbonate resin composition according to claim 1 or 2, wherein the organosiloxane of ingredient (E) is organopolysiloxane.
7. The polycarbonate resin composition according to claim 1 or 2, wherein the organosiloxane of ingredient (E) is an alkylhydrogensilicone or an alkoxysilicone.
8. The polycarbonate resin composition according to claim 7, wherein the alkoxysilicone is an organopolysiloxane with a molecular structure in which an alkoxy group bonds to a silicone main chain through a methylene group.
9. A polycarbonate resin molding obtained by molding of the polycarbonate resin composition according to claim 1.
10. The polycarbonate resin molding according to claim 9, wherein the molding is a plate, a sheet, a film, or a molding obtained by thermomolding or pressmolding thereof.

11. The polycarbonate resin molding according to claim 9, wherein the molding is a molding obtained by injection-molding.
12. The polycarbonate resin molding according to any of claims 9 to 11, wherein the molding is a light reflector.
13. The polycarbonate resin molding according to claim 12, wherein a reflectance (Y value) of the polycarbonate resin composition composing the light reflector is 93 or more and a total light transmittance thereof (wall thickness: 1 mm) is 0.6 or less.
14. The polycarbonate resin molding according to claim 13, wherein a product $A \times B$ is 150 or more, wherein A (in the unit of nm) is the surface roughness Ra of the light reflector measured through intermittent contact with an AFM (atomic force microscope) and B (in the unit of g) is the titanium oxide content thereof.
